

# Project 19: Turtle Graphics Movement

## Description

This project demonstrates basic movement of a turtle using the 'turtle' graphics library in Python. The turtle moves forward when the space key is pressed. This simple interactive program allows for basic keyboard event handling and movement control using the turtle graphics library.

## Key Technologies

- **Python:** Used for creating the graphical interface and handling user inputs.
- **Turtle Module:** Utilized to create and control the turtle graphics and listen for keyboard events.
- **Concepts Covered:** Keyboard event handling, turtle graphics, and basic movement commands.
- **Unique Features:** Interactive movement of the turtle controlled by keyboard input.
