

Project 9: Bidding System

Description

This project is a simple bidding system where users can place their bids, and the system determines the highest bidder. Users enter their names and bid amounts, and the system keeps track of all bids. Once bidding is finished, the highest bidder is announced with their bid amount.

Key Technologies

- **Python:** Used for implementing the bidding logic, handling user input, and managing bid records.
- **Concepts Covered:** User input handling, dictionary operations, and basic control flow (loops and conditionals).
- **Unique Features:** Dynamically manages multiple bids and announces the highest bidder after all bids are collected.
