

# Project 1: Band Name Generator

## Description

The Band Name Generator is a simple Python script designed to help users create fun and unique band names. The program prompts the user to input the name of the city they grew up in and their pet's name. It then combines these inputs to generate a creative band name. This project is a great introductory exercise in Python, focusing on string manipulation and user input.

## Key Technologies

- **Python:** The core programming language used for this project.
- **Built-in Functions:** `input()` for capturing user input, and `print()` for displaying the final band name.
