

Project 3: Treasure Island Adventure Game

Description

This is a simple text-based adventure game where the player embarks on a quest to find hidden treasure on a mysterious island. The game presents a series of choices at different stages, each leading to different outcomes, including victory or game over scenarios. The player's mission is to navigate the challenges and make the right decisions to find the treasure.

The game is designed to be interactive and educational, helping beginners learn about basic Python programming concepts such as **conditionals (if statements)**, **user input**, and **string manipulation**.

Key Technologies

- Python (No external libraries required)
