

Project 34: Quiz Application

Description

This project is a quiz application that uses a question bank to run a quiz game. The application loads questions from a dataset, displays them to the user, and tracks the user's score. It includes a user interface for interaction and keeps track of the quiz progress.

Key Technologies

- **Python:** Used for implementing the quiz logic, managing the question bank, and handling user interactions.
- **OOP Principles:** Utilized to create classes for questions, the quiz brain, and the user interface.
- **Concepts Covered:** Object-oriented programming, list management, and user interface design.
- **Unique Features:** Integrates question handling, quiz logic, and a user interface in a cohesive application.
